

Down Syndrome Clinic

The Down Syndrome Clinic at Ochsner is dedicated to helping your child stay healthy and reach his/her greatest potential. Our clinic is designed to assist your child's primary care provider in ensuring that your child's special healthcare needs are met. In addition, the clinic works as a multi-specialty team in the evaluation and management of all of your child's developmental and medical needs.

The frequency and types of appointments will be individualized for each child. Generally, initial visits will be with one of our developmental pediatric providers, and will likely include cognitive, adaptive, speech and motor assessments conducted by one of our trained clinicians.

The Michael R. Boh Center for Child Development works directly with highly trained subspecialists at Ochsner and will provide and/or coordinate any necessary medical services. The Boh Center for Child Development also provides therapeutic and counseling services. Our medical team, clinical staff and social worker will also assist with recommendations for care provided in your community and school.
